### **Credit Recovery Algebra II**

The purpose of this course is to allow students who have previously failed Algebra II to gain mastery of course concepts of advanced algebraic concepts including functions, polynomials, rational expressions, systems of functions and inequalities, and matrices. Students will be expected to describe and translate among graphic, algebraic, numeric, tabular, and verbal representations of relations and use those representations to solve problems. Emphasis will be placed on practical applications and modeling. Appropriate technology, from manipulatives to calculators and application software, will be used regularly for instruction and assessment. Upon successful completion of this course, students will be prepared for pre-calculus and other higher-level mathematics courses. Students will pre-assess at the beginning of each unit to determine their course work path.

### **Prerequisites**

Algebra II recently failed
