Credit Recovery Geometry

The purpose of this course is to allow students who have previously failed Geometry to gain mastery of course concepts that explore the relationships, measurements and properties of one, two and three dimensional objects. Logic is used in the form of deductive reasoning needed to solve problems not only in Geometry but in other subsequent courses. The core concepts covered are triangles, quadrilaterals, and circles. Students will pre-assess at the beginning of each unit to determine their course work path.

Prerequisites

Geometry recently failed
